---

## Front end developer

Professional with 2 years of experience in software development. Skilled in Angular's Life Cycle Hooks, Routing, and RxJS Subjects. Experienced in API integration and optimization. Proficient in Spec file writing. Adept at optimizing performance, and ensuring cross-browser compatibility. Skilled in integrating RESTful APIs.

## SKILLS

---

- |             |              |                |
|-------------|--------------|----------------|
| • Angular   | • Html       | • Nodejs       |
| • Bootstrap | • Javascript | • Python       |
| • Css       | • Jira       | • Tailwind css |
| • Git       | • Mysql      | • Typescript   |

## WORK EXPERIENCE

---

### Revolution Games India Private Limited

Nov 2022 - Dec 2024

#### Software Developer

- Developed and maintained Angular-based web applications, using key lifecycle hooks like `ngOnInit`, `ngDestroy`, and `ngAfterViewInit` to manage component states and DOM interaction efficiently.
- Designed and implemented complex routing architectures, including parameterized , to support a seamless single-page application experience.
- Hands-on experience with RxJS Subjects, including `Subject` and `BehaviorSubject`, to implement reactive programming patterns, enable inter-component communication, and manage application state effectively.
- Experienced in integrating API with Front-end Framework
- Handled all aspects of web application including maintaining, testing, debugging.
- Wrote unit tests using Angular's testing utilities (`.spec.ts` files), contributing to robust, test-driven development during releases.
- Consistently ensured timely featured delivery in Agile-driven Projects

## PROJECTS

---

### Plannote 3

- It is a drawing based civil application, that enables user to draw plotting annotation , attaching forms and images to the annotations
- Main aim of this application is to draw or plot the annotation on the images that wherever we can find the defect in the building or tunnel in the image
- Technologies used: **Angular**

### RG- Workspace

- It is an employee tracking based application , It helps employee to apply leaves , permission and tracks the employee's productivity hours
- Reported person can approve the leave or permission for employees whose under to the reported person
- Technologies used: **Flutter**

### Qrdinn

- Built a QR-driven food ordering platform where users scan a QR code to view menus and place orders seamlessly.
- Integrated with the backend to generate QR codes dynamically, and implemented functionality to download and store QR codes in a table on the frontend.

- utilizing router query parameters to retrieve userId and tableId, and dynamically display the corresponding order details.
- Admin Panel: <https://qrdin-adminpanel1.vercel.app/>
- QR Redirect Example: <https://qrdinn.github.io/Qrdinn/#!/userid/26024d74-1007-4ab1-a68e-b5c7d1056f7a/tableid/1>

## EDUCATION

---

### [Bsc computer science]

Agurchand Manmull Jain College • GPA: 83%

Jan 2019 - Jan 2022

### [ HSC ]

Sri Ahobila Math Oriental High Sec School • GPA: 71%

Jan 2019

### [ SSLC ]

Sri Sankara Vidhyalaya High Sec School • GPA: 86%

Jan 2017
